Dear Researcher,

I am writing to wholeheartedly recommend Artur Nastasovici for any professional/ academic opportunities. Artur has been an outstanding intern to our biochemistry research program, focusing on the study of enzyme kinetics and uncovering novel metabolic breakdown pathways of small organosulfur metabolites. Throughout Arturs time in our lab, I have been impressed by his dedication, intellectual curiosity and exceptional analytical skills. He is a quick learner, adapting to new techniques, and protocols with ease.

Artur has a meticulous approach to experimental design, execution and data analysis. He has a high level of precision and accuracy when performing enzyme kinetic assays and is competent in the optimization of enzyme conditions including buffer choice, pH, and concentrations of enzymes/substrates/co-factors. Artur has experience in generating reliable Michaelis-Menten and Lineweaver Burk plots, work that has contributed to the publication "Structural and kinetic insights in the stereospecific oxidation of 2,3-dihydroxypropane sulfonate by DHPS-3-dehydrogenase (HpsN) from *Cupriavidus pinatubonensis*" (DOI: [10.26434/chemrxiv-2023-891j3](https://doi.org/10.26434/chemrxiv-2023-891j3)) alongside a second paper to be published soon. Additionally, Arthur has microbiology experience in the culturing, subculturing and plating of bacteria. He is competent in using sterile techniques and in the preparation of liquid and agar media.

Beyond Arturs technical proficiency, he has demonstrated excellent teamwork and communication skills and has been responsible for distributing and assisting the monthly lab group clean-up rosters. He collaborates effectively with other team members, contributing valuable insights during group discussions and fostering a positive and collaborative work environment. I am confident Artur will continue to excel in his academic and professional pursuits as a standout candidate. I recommend him and believe he will be a valuable asset to any academic program or organization.

Yours sincerely,

Dr Laura Burchill
